

## 2.0 FRAMING

- Required #KZK-054 (see #KZK-054 manual) or single opening vented cavity (see #CLW-ST installation manual) have specific framing requirements applicable to their installation. Framing requirements outlined in the #CLW-ST installation manual will still apply to this installation.
- Framing drawings shown in this manual are shown with nominal 2 x 6 exterior framing and nominal 2 x 4 interior framing.

If your exterior wall is thicker than nominal 2 x 6 construction, you will have to sub-frame these framing requirements in nominal 2 x 6 framing to meet clearance requirements.

- Maintain all appliance and vent clearances to combustible material.
